Lafii: recording the demo on one phone

One person, one Android phone, one laptop. You play both the Community Health Officer and the hospital by switching the app between Refer and Receive mode. About 30 minutes to set up and record; the finished video runs about 6 minutes.

Refer	The app in Refer mode: you are Amina Mahama, the Community Health Officer.
Receive	The app in Receive mode: you are the maternity ward at Walewale Hospital.
Phone	Android itself: screenshots, settings, screen recorder.
Laptop	The laptop: shows a QR screenshot so the phone camera can scan it.

How one phone scans its own QR codes

The app scans with the camera, and a phone cannot point its camera at its own screen. So each time a QR code appears you will: take a **screenshot**, copy it to the laptop, open it full screen there, switch the app to the other mode, and scan the laptop screen with the phone. This happens twice: once for the referral, once for the acknowledgement.

Before you press record

1. **Install the latest app** (Lafii-arm64.apk). If it was installed before, clear its data so the demo patients load fresh: Android Settings › Apps › Lafii › Storage › Clear storage.
2. **Turn on airplane mode.** The app must work with no network, and the video should show the airplane icon. Bluetooth and Wi-Fi off too.
3. **Connect the phone to the laptop with a USB cable** and choose File transfer when the phone asks. This is how screenshots reach the laptop with no network. Leave the cable plugged in.
4. **Turn on Show taps** so viewers see each tap: Settings › System › Developer options › Show taps. (If Developer options is hidden: Settings › About phone, tap Build number seven times.)
5. **Turn on Do not disturb**, brightness to maximum, and close other apps.
6. **Laptop**: open the phone's DCIM › Screenshots folder in File Explorer, and turn the laptop's screen brightness up.
7. Keep this guide beside you and do every step in order. A skipped step usually means starting again from Scene 1.

Scene 1. Start recording and set up as Amina

The officer sets the phone up once: no account, no login.

#	Where	Do this	You should see	OK
1	Phone	Swipe down twice from the top, tap **Screen record**. Choose **no audio** (the voice-over is added later) and start.	A countdown, then a small recording indicator.	☐
2	Refer	Open **Lafii**. Under This phone is used to, keep **Refer patients**.	**Set up this phone**.	☐

#	Where	Do this	You should see	OK
3	Refer	Your name: `Amina Mahama`. CHPS zone: `Kpasenkpe`. Your phone number: `0244112233`. Facility: tap the box, choose **Kpasenkpe CHPS**.	**Start using the app** turns dark blue.	☐
4	Refer	Tap **Start using the app**. Pause for 3 seconds on Home.	Home: **Referrals not yet confirmed** (Abibata Fuseini, Damata Yakubu) and **Due this week** (Fati Alhassan first).	☐

Scene 2. Find Fati, without her card

Spellings vary, and the app never guesses which record is hers.

#	Where	Do this	You should see	OK
5	Refer	Tap **Find by name**. Type `fati alhas`.	**2 records match**: Fati Alhasan (27) and Fati Alhassan (28), both Kpasenkpe. No score anywhere.	☐
6	Refer	Tap **Fati Alhassan** (age 28).	**These may be the same woman**: two cards side by side. Pause 3 seconds.	☐
7	Refer	On the card showing **Visits 3** and a phone number, tap **This is her**.	**Antenatal visit 4**, Fati Alhassan · 28 · Kpasenkpe.	☐

Scene 3. Speak the visit

Speech is turned into text on the phone, in airplane mode. Every value must still be confirmed by hand.

#	Where	Do this	You should see	OK
8	Refer	Tap **Speak instead** (top right).	**Ask before recording**, with Dagbani selected and the consent text.	☐
9	Refer	Tap **She agreed**. Allow the microphone if asked.	First “Not listening yet”, then **Recording. Speak now.** with a seconds counter.	☐
10	Refer	When the counter appears, hold the phone about 20 cm away and say clearly: **“Blood pressure one forty over ninety five. She has a severe headache. No bleeding. No fits.”**	The counter keeps counting.	☐
11	Refer	Tap **Stop and review fields**.	**Check what you said. What the phone heard** shows your sentence. Systolic 140, Diastolic 95, Severe headache Yes, Vaginal bleeding No, Fits No appear in dashed grey boxes.	☐
12	Refer	Tap **Confirm** on each dashed value, one at a time, slowly.	Each turns solid with a green **Confirmed**. There is no confirm-all.	☐

If a value was misheard or missing: tap the value to correct it, or tap **Enter** next to it and type it. Typed values count as confirmed. Do not re-record; carry on with the scene.

Scene 4. The assessment and the referral

A fixed protocol rule, not AI, decides. The referral is a code plus a signed QR.

#	Where	Do this	You should see	OK
13	Refer	Tap **Continue to assessment** at the bottom. Pause 4 seconds.	Yellow banner: **URGENT · REFER TODAY**, **Signs of pre-eclampsia**. Because you recorded: Blood pressure 140/95, Severe headache: Yes.	☐
14	Refer	Tap **Issue referral**.	**Write this code on her card**: a six-character code, a large QR code, and **Tell Fati**. Write the code here: _____	☐
15	Phone	**Take a screenshot now** (power + volume down together). Do not leave this screen before the screenshot is taken: it cannot be reopened.	A screenshot preview flashes in the corner.	☐
16	Refer	Tap **Code written on the card**.	Home. Referrals not yet confirmed now says **See all 4**.	☐

Scene 5. Become the hospital

The same phone now plays Walewale Hospital.

#	Where	Do this	You should see	OK
17	Laptop	On the laptop, open the newest file in DCIM › Screenshots (the referral QR). Press F11 or double-click for full screen.	The QR fills the laptop screen.	☐
18	Refer	On Home, scroll down and tap **Settings**.	**Settings**.	☐
19	Refer	Tap **Receive patients**. Your name: `Rahinatu Seidu`. Ward or unit: `Maternity ward`. Your phone number: `0209981234`. Facility: **Walewale Hospital**. Tap **Save settings**.	A dark blue screen: **Walewale Hospital · Rahinatu Seidu**, and **Scan arriving card**. The status strip reads Receive mode · Walewale Hospital.	☐

Scene 6. Fati arrives at the hospital

The hospital reads everything from the QR: no network, nothing synced in advance.

#	Where	Do this	You should see	OK
20	Receive	Tap **Scan arriving card**. Allow the camera if asked. Point the phone at the laptop screen, 20 to 30 cm away, square on.	The camera closes by itself once it reads the code.	☐
21	Receive	Pause 5 seconds. Scroll slowly to the bottom and back.	**Fati Alhassan, 28**, the referral code, from Amina Mahama, Kpasenkpe CHPS, **Officer's phone 024 411 2233**. Green **Signature valid**. **Referred because the officer recorded**: Blood pressure 140/95, Severe headache: Yes. Then **Everything on her card**.	☐
22	Receive	Tap **Confirm arrival**.	**Arrival confirmed** with the time, **Add an outcome**, and an acknowledgement QR.	☐
23	Receive	Tap **Admitted**. Tap the Follow-up at CHPS box and pick a date 3 days from today.	The QR redraws after each change.	☐
24	Phone	**Take a screenshot now** of the acknowledgement QR.	A screenshot preview flashes.	☐
25	Receive	Tap **Done**.	Receive home lists Fati Alhassan, Urgent, with **Arrived** and the time.	☐

If the scan does not read: make the laptop QR bigger, lower the phone's angle to remove glare, and hold still for two seconds.

Scene 7. Back to Amina: the loop closes

The officer learns Fati arrived, with no network.

#	Where	Do this	You should see	OK
26	Laptop	On the laptop, open the newest screenshot (the acknowledgement QR), full screen.	The smaller acknowledgement QR fills the screen.	☐
27	Receive	Scroll down on the hospital home and tap **Settings**.	**Settings**.	☐
28	Receive	Tap **Refer patients**. Your name: `Amina Mahama`. CHPS zone: change it to `Kpasenkpe`. Your phone number: `0244112233`. Facility: **Kpasenkpe CHPS**. Tap **Save settings**.	Amina's Home again. Referrals not yet confirmed says **See all 4**.	☐

#	Where	Do this	You should see	OK
29	Refer	Tap **See all 4**.	**Not yet arrived**: Abibata Fuseini (Emergency) first, Fati Alhassan last, Today.	☐
30	Refer	Tap **Scan an acknowledgement** and point the phone at the laptop.	**Acknowledgement scanned**, **Fati Alhassan arrived**: arrival time, Admitted, the follow-up date, Received at Walewale Hospital, **Confirmed by** Rahinatu Seidu, **Their phone** 020 998 1234. Pause 4 seconds.	☐
31	Refer	Tap **Back to home**.	Home. Referrals not yet confirmed now says **See all 3**: Fati is off the list.	☐

Scene 8. What the officer gets back

The visit fills in her register and monthly report for her.

#	Where	Do this	You should see	OK
32	Refer	On Home, scroll down and tap **October report** (the current month).	**Today's register lines** with Fati's line ending in Ref: Walewale and the code. Below, **DHIMS2 data elements** with counts.	☐
33	Refer	Tap **Export register and report**. Pause 2 seconds, then press back.	The Android share sheet with two CSV files. Nothing is sent.	☐
34	Refer	Press back to Home. Pause 3 seconds.	Home.	☐
35	Phone	Swipe down and tap the recording indicator to **stop recording**.	The video is saved in Photos or Gallery, under Movies or Screen recordings.	☐

After recording

1. **Watch it through once.** Check that every QR scan, the dashed values turning Confirmed, the urgent banner and the arrived screen are all visible.
2. **Trim** the dead time while you moved to the laptop. The phone's built-in video editor or any laptop editor is fine.
3. **Keep airplane mode visible** at least at the start and during both scans: it is the evidence that nothing used the network.
4. **Voice-over**: record it separately against the trimmed video, or narrate from the separate voice-over script.
5. **If you must redo it**: clear the app's storage (Before you start, step 1) so the demo patients reload, and start again from Scene 1.

If something goes wrong

No women on Home: the app was first set up in Receive mode. Clear its storage and set up again as Refer.

Start using the app stays grey: one of name, zone, phone number or facility is empty, or the phone number has fewer than 9 digits.
What the phone heard says Silence: another app is holding the microphone, or the app has no microphone permission. Fix it, then type the values instead.
Scan does not read: QR too small or glare on the laptop. Enlarge it and tilt the phone.
Not on this phone after scanning the acknowledgement: the referral was issued before the app's storage was last cleared. Start again from Scene 1.
